Personal Recovery Concepts partners with Encryption Security Solutions on data encryption

Companies bring 256-bit JUMBLE™ technology for best-in-class encryption of personal data

FOR IMMEDIATE RELEASE: March 31, 2009

HUNTINGTON BEACH, CA - Today, Personal Recovery Concepts, LLC announced its partnership with Encryption Security Solution's EncryptoSafe™ product, a 256 bit data encryption utility capable of encrypting and decrypting files for electronic storage. The companies will private-label the product PersonalRecovery Lock™ as part of the bundled Complete Solution offered by Personal Recovery Concepts.

Through this partnership, Personal Recovery Concepts' delivers best-in-class data security for the electronic files its Personal Recovery Professional™ software produces, effectively safeguarding highly personal information.

The Complete Solution

Personal Recovery Concepts' Complete Solution comprises its Personal Recovery Professional™ software, the Interactive Participation Workshop™ and the newly added component PersonalRecovery Lock™. The entire system retails for \$69.99.

Solution overcomes key barriers to access for data encryption by individuals

Encryption Security Solution's innovative and proprietary encryption engine has been heralded as a "game-changer" in the data encryption space for its effectiveness in the high level of data security it delivers as well as how it overcomes key issues that plagued other encryption solutions. These include difficulty-of-use; excessive memory use; slow execution; file type and size restrictions and transmission of data over unsecure systems, such as e-mail.

Its revolutionary small footprint as well as the speed at which it processes information has moved data encryption into a viable solution that is sophisticated enough for use by government agencies, yet attainable and useful for individual buyers. The utility is compatible with any digital format including electronic files, video, audio and alphanumeric and provides real-time encryption without file type or size restrictions.

Allows individuals to store and recover highly personal data easily and reliably

PersonalRecovery Lock™ has a simplicity that fits Personal Recovery Concepts' straightforward design philosophy. A simple drag and drop process encrypts the file. The 256 bit encrypted file can remain on the computer - making the information it contains easy to restore for everyday needs. Per best practices to maintain multiple files outside the home, the file can be transferred to electronic storage such as a CD-ROM, flash drive or housed on a secure online storage system.

Supporting Quotes

Ann Coss, CEO, Personal Recovery Concepts, LLC

"Centralizing the right personal data is a powerful step to ensure the best outcome and shortest time to recovery from an unexpected or catastrophic event. By safeguarding such data with a level of security that is good enough for government use, our Complete Solution delivers incredible value at an attainable cost and overcomes a key barrier by users who had concerns over having their personal information so centralized".

"Encryption Security Solutions' focus on creating best-in-class data security products that are simple enough for individuals, yet scalable and reliable enough for large enterprises and government. This further distinguishes our product suite and adds tremendous value for our clients".

ABOUT ENCRYPTION SECURITY SOLUTIONS, LLC

Founded in May of 2006 by three Michigan entrepreneurs whose stated goal is "To provide unprecedented encryption security, efficiency, and performance to our customers so as to ensure that their critical information is secure". The company's cutting-edge technology places them in the forefront of currently available encryption systems.
