## encryptoMail™

### Best in Class Security Products

It is estimated that approximately **30 billion** emails are sent every single day. Of those nearly **1 in 5** contains content that poses a legal, financial, personal or business risk to the sender or recipient. Too many people assume the information in their emails is "safe". They think they're protected at home because their wireless router is protected; their servers at the office are secure; their email servers are password protected and besides, no one is going to hack into their emails. **They would be wrong.**

The hacking of emailed information is so wide-spread that it affects virtually everyone from grade-school students to the senior executives to the civil servants to volunteer workers. There is a constant stream of seemingly "unimportant" information flowing through your emails every day. Hackers can use this information to wreak havoc on individuals, companies and organizations and do it so quickly that the damage is done before it is even detected. **Anyone could experience a catastrophic theft of information leaving them vulnerable, damaged by a hacker's malicious intentions.**

The best way to guard yourself from harm is to secure your email from the prying eyes of hackers. The best way to do this is to employ an email encryption/decryption solution. The best is **encryptoMail™** from Encryption Security Solutions. This easy to use software protects sender and recipient alike and provides the protection you need in today's insecure world.

#### encryptoMail™ is so easy to use:

Once installed your Microsoft Outlook™ program will have a "security" button installed right into your top task bar.

- Compose your email, attach any files then click "Security, encrypt".
- Enter a password of your choosing and hit "Okay".
- Your email is ready to be safely, securely transmitted.
- To decrypt an email, open the email, click "Security, decrypt."
- Enter the password required and hit "Okay".
- The email has now been restored to its original, unencrypted state!

#### encryptoMail™ Features

- Secure, 256 bit encryption
- Unparalleled ease-of use (5 minute maximum training)
- No slow-down in email function
- Compatible with Microsoft 2003 & 2007 Outlook™
- Works with any email and any type of email attachment
